Juan Diego Cortés Torres | Backend Developer (.NET & RESTful APIs)

+57 321 591 1807 • juandic07@gmail.com • juandic24
juan-diego-cortestorres

Profile

Backend developer with a background in Systems Engineering, specialized in C# (.NET) and the development of robust and scalable RESTful APIs. Hands-on experience with layered architectures, microservices, JWT authentication, and containerization using Docker. Focused on writing clean, well-structured, and production-ready code.

Projects

AnimalLibrary (2026)
REST API – ASP.NET Core Backend:
- Layered architecture (Controllers / Services / Repositories)
- Data transfer using DTOs
- PostgreSQL integration with Entity Framework Core
- Asynchronous programming (async/await)
- Repository: `https://github.com/juandic24/animalLibrary`

GameStore (2026)
REST Minimal API – .NET Backend:
- Entity Framework Core with SQLite
- JWT authentication with role-based authorization
- Full CRUD operations
- Public and protected endpoints
- Data validation using annotations
- Repository: `https://github.com/juandic24/gameStore`

Microservices Application (2024)
Distributed Architecture – Backend:
- Design and implementation of a microservices architecture
- Independent services for monitoring, logging, and notifications
- Multi-language environment: Python, JavaScript, Java
- REST API consumption and inter-service communication
- Containerization with Docker and orchestration using docker-compose
- Repository: `https://github.com/juandic24/proyecto-final-microservicios`

Skills

Languages: C#, Java, Python, SQL

Backend: .NET, ASP.NET Core, RESTful APIs

Frontend: JavaScript, HTML, CSS

Databases: MySQL, SQL Server, PostgreSQL, SQLite

Tools: Git, GitHub, Docker, Postman, Jenkins

Languages: Spanish (Native), English (B2 – EF SET 62)

Education

University of Quindío **Colombia**
Bachelor's Degree in Systems and Computer Engineering *2019–2025*

Experience

University of Quindío **Colombia**
Programming Teaching Assistant *2024*

- Supported students with programming fundamentals, answering questions about logic, data structures, and problem-solving.
- Explained key concepts using Python, adapting explanations to each student's level.
- Reinforced best practices and algorithmic thinking through personalized sessions.

Additional Projects

Generative AI: Exploration of generative models in an academic context. Conducted a comparative analysis of autoregressive models for image generation (PixelCNN vs. PixelCNN + VQ-VAE), evaluating visual quality, training stability, and computational efficiency.
